Synopsis Books:

Immensely popular during his lifetime, **H. G. Wells**, along with Jules Verne, is credited with inventing science fiction. This new volume collects Wells' best-loved and most critically acclaimed works. In each, the author grounds his fantastical imagination in scientific fact and conjecture while lacing his narrative with vibrant action, not merely to tell a ripping yarn, but to offer a biting critique on the world around him. The strength of Mr. Wells, wrote Arnold Bennett, lies in the fact that he is not only a scientist, but a most talented student of character, especially quaint character. He will not only ingeniously describe for you a scientific miracle, but he will set down that miracle in the midst of a country village, sketching with excellent humor the inn-landlady, the blacksmith, the chemists apprentice, the doctor, and all the other persons whom the miracle affects.
